## WORK EXPERIENCE

---

### Datagram

Backend Developer - Django REST Framework

May 2024 - May 2025

- **Experienced in developing APIs capable of generating Excel reports**, including tables and graphical analyses using **Matplotlib**, background coloring, custom fonts, and multi-colored charts to enhance readability and user engagement, advanced formatting and visual customization.
- **Proficient in leveraging various Django libraries for building robust CRUD functionalities.**
- **Comprehensive API documentation** provided for all developed services, ensuring clarity and ease of integration.
- Skilled in developing **APIs that integrate with external databases**, including **direct SQL queries**, **Firebase**, among others.
- **Advanced consumer of third-party APIs**, including services such as **STP, Contalink, Kommo, INEGI, RestCountries**, and more.

## EDUCATION

---

### EBAC

Backend Python - 95

Jun 2023

A complete course focused on specialization as an API (with django & django rest\_framework) or view designer for frontend client consumption, addressing any user need for consuming metadata in any format, including Excel reports, external server consumption, class-based views, custom views built from scratch for specific use cases, and more.

### Coderhouse

Web Development - 75

Jun 2025 - Ago 2025

Completed a Web Development course on the Coderhouse platform, focusing on HTML, CSS, Sass and Bootstrap to strengthen foundational front-end skills and enhance the styling of interfaces built with Django.

### Openenglish

Intermediate english - 85

Jan 2024 - Aug 2024

I also have an intermediate level of English proficiency, allowing me to read technical documentation, understand engineering terminology, and communicate effectively in professional and academic environments.

### Coderhouse

JavaScript - 95

Nov 2025 - Jan 2026

Junior-level JavaScript developer experienced in API consumption, dynamic template creation using string-based rendering, and building basic simulators. Familiar with libraries such as SweetAlert and Toastify for user interaction and notifications. Primarily focused on integration with Django REST Framework backends.

## PROJECTS

---

### EDteam copy

Jul 2025

This project is focused on taking inspiration from the design of one of the leading references in online education today (<https://ed.team/>), a platform dedicated to providing accessible education for everyone interested in the world of technology.

Github repository - <https://github.com/JohnCard/EDteam---replica>

## Online ecommerce (CRUD administrator)

Sep 2025

Project integrated both a frontend client and a backend server. It interacts with a server built using Django REST Framework. The functionality of the project is demonstrated in the following YouTube link:

<https://youtu.be/sA1ci8obzws>

backend server repository - <https://github.com/JohnCard/Backend---codeandote>

frontend server repository - <https://github.com/JohnCard/Online-ecommerce>

Please note that the previously shared Vercel link to the frontend client may not work, as it requires cloning the backend server project, which is also built with Django. This process may take some time. The frontend client link is shared merely as an additional reference.

## Portfolio online

Nov 2025 - Dec 2025

Demonstrative personal online page showcasing all the technical skills offered so far, along with all our projects.

github repository - <https://github.com/JohnCard/profile>

## Shopping cart simulator (JS | Bootstrap)

Jan 2026 - Feb 2026

A full-featured client-side e-commerce simulator built with JavaScript, Bootstrap, and Sass. Features user authentication, a dynamic product gallery with a custom carousel, a shopping cart with real-time stock management, and full session persistence using localStorage as the data layer.

vercel deployment - <https://primer-entrega-javascript.vercel.app/>

github link - <https://github.com/JohnCard/ProyectoFinal-Sanchez-Martinez>

## Shopping cart simulator (react | rest framework)

april 2026

Frontend client built with JavaScript for dynamic behavior, React for creating reusable and interactive components and Material UI to provide a responsive and visually appealing user interface. It was developed to interact with a backend server built using Django REST Framework.

## Shooping cart (django | JS | Bootstrap)

March 2026

A project built with JavaScript, Bootstrap and django to automate the html templates based on a Product and a Category models. This simulator was built with django framework to emulate a online ecommerce + shooping cart online

## SKILLS

---

- Django for automation of templates
- rest framework (1 year professional experience)
- Bootstrap
- JavaScript
- React
- Material UI
